

# How to use NFC Tags

## Scanning a Tag

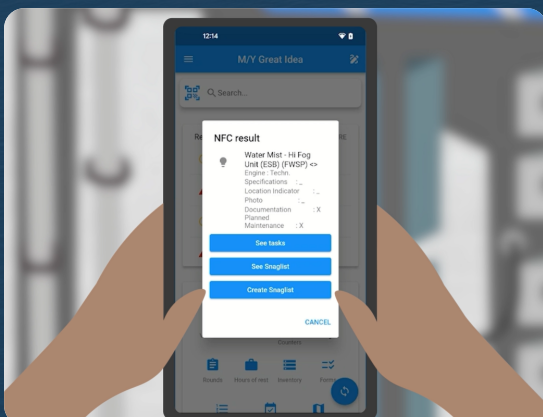

**Step 1:** Locate the NFC tag and open the **IDEA YACHT app**.

**Step 2:** On Android simply **hold the phone over the NFC tag** until it identifies it. On iOS **press the NFC tag button shown and scan** when prompted.

**Step 3:** Once the NFC Tag has been scanned, it will show you the 'NFC result'. The NFC result should be the **name of the item, component or storage area** that the NFC tag was attached too. **(This is what the NFC tag would have been named once the tag was originally set up.)**

**You now should have the option to:**

- See Tasks
- See Snaglist
- Create Snaglist
