IDEA YACHT Release 2024.3

2024.3 Key changes

IDEA YACHT software update 2024.3 introduces several exciting new features and improvements. A new 360 Photo Viewer allows users to view photos of the vessel through different build stages for better maintenance. A system setting now enforces a budget for purchase orders. The mobile app includes an extended layout drawing module, new layout filters, and the ability to add documents and create Snag List entries during rounds.

Notifications for new snag entries and an updated UI for better usability on larger screens have been added. The IDEA Chat tool now includes search functionality for Snag List and Direct Order chats. In the mobile app, users can now add and edit photos in various sections, perform actions after scanning NFC tags, and add component cover pictures.

Fixes address issues with date display, search result views, notification generation for snag list modifications, and calendar birthday displays. The update also includes upgrades for Gradle plugins and addresses NFC tag license constraints.

2024.3 Changelog

🖥 IDEA YACHT

- **360 Photo Viewer/Editor: New Photo Documentation viewer (below)**
  - View 360 photos of your vessel through different build stages to aid with maintenance and locate vital components and wiring etc.
 - Create polygons on your 360 photos to create areas and assign locations for components

- New System setting **that enforces a budget for purchase orders**

- **IDEA Snag List now has a layout view in the web version. (below)**
  - With the GA layout on the right, lists/table on the left, this great new advancement will allow you to quickly see the points in a workflow on your different layouts.
- **IDEA Snag List sharing numbers** are now department code and a counter.
  - The external page still shows the project number in front to help distinguish between multiple projects.
- A new **notification when a new snag entry is created**.
- **Updated UI for IDEA Snag List Cloud** to make the page easier to use on bigger screens, fix and align elements to follow design rules.

- **IDEA Chat Tool New Functionality (below)**
  - Search capability within the Snag List and Direct Order chat on the IDEA webpage.
  - Search capability within the Snag List and Direct Order chat on the IDEA
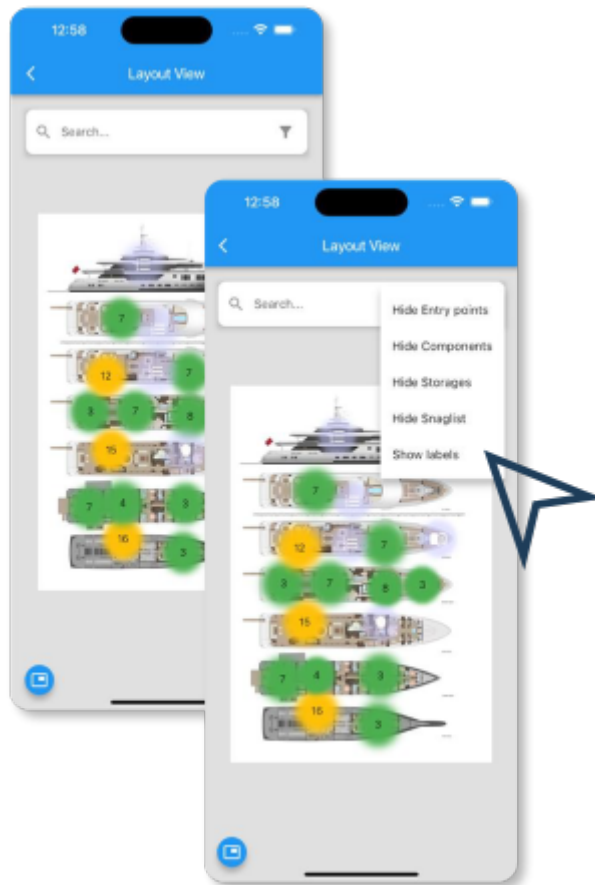

external page.

- **New purchase approval widget** on the IDEA dashboard.
- PO Approval Widget: Added a new dashboard widget for approving purchase orders directly from the dashboard.

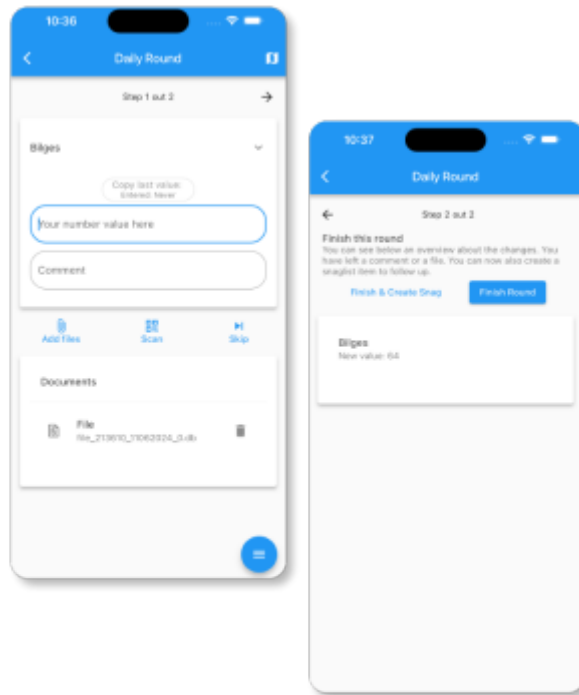

📱 IDEA YACHT App

- Extended **layout drawing module** in the mobile app to **allow markers** (below)
- New Mobile Layout filter, for filtering all layout element by category

- Added a view where you can add photos, to **allow users to edit images** in the following sections:
  - Spare part
  - Storage
  - Snag list document and note
- **Additional actions after scanning an NFC tag**. For instance, upon scanning a component, users will be able to create snag lists.
- Implement the functionality to **add documents whilst performing a round (below)**
- Create a **Snag List entry** at the end of a round

- **Major update to allow you to customise the app dashboard (below)**
  - Define and implement widgets
  - New menu style

Fixes and Improvements:

- You cannot import a component with the same name as a component that already exists in the same group
- Error when opening "Permissions" page when some permissions are disabled

- Small part of picture in right top corner is missing in Search overview
- Display dates in the snag list details view based on the phone configuration.
- Fix the issue where search results are always shown in tiles view, even if the system setting is set to list view.
- Fix the issue where modifying a snag list entry in the mobile app does not generate notifications.
- Fix the issue where adding a new comment to a snag list does not generate a notification.
- Fix the issue where the calendar does not show birthdays.
- Fix the issue where the start and end date fields for the "Timeframe" filter are not editable when the "Maintenance – Writeable" permission is disabled.
- Layout Actions: Ensured that all action buttons for layout are always visible, regardless of browser size.
- Report Fields: Hid fields related to purchase approval and budget approval from the report based on the purchase order states settings.
- Snag List Cloud Page: Added new columns in the list view: "Last updated by IDEA Client" and "Last updated by Vendor."
- Snag List Cloud Page: Made changes to the left side menu displayed on the snag list details page from the external page.
- Snag List Notifications: Implemented notifications for snag list creation.
- Unique Name Field: Displayed the project number in front of the content in the "Unique Name" field on the snag list details page included in the cloud page.
