

**Smooth Sailing with IDEA**  
**Supporting an 80m New Build**

**Project Start:** October 2022  
**Vessel Handover:** Planned for mid-2024  
**Client:** Captain & Chief Engineer of an 80m new build  
**Software:** IDEA YACHT

**The Challenge**

When the crew began work on their 80m new build, they knew they had a long road ahead. With just the Captain and Chief Engineer onboard at the start, they reached out to IDEA early on, having used the software before, they trusted us to help get things right from the beginning.

Their goal was clear: have a fully functional vessel database ready by handover, without getting bogged down in the setup. They wanted to focus on the build, commissioning, and acceptance tests, while IDEA handled the digital side.

## Our Approach

IDEA took care of the full database setup, including:

- Adding critical and auxiliary equipment
- Creating maintenance tasks for each component
- Setting up AMS connections
- Linking all relevant documentation

This freed up the crew to concentrate on the physical build, knowing the digital infrastructure was in expert hands.

## Working Together

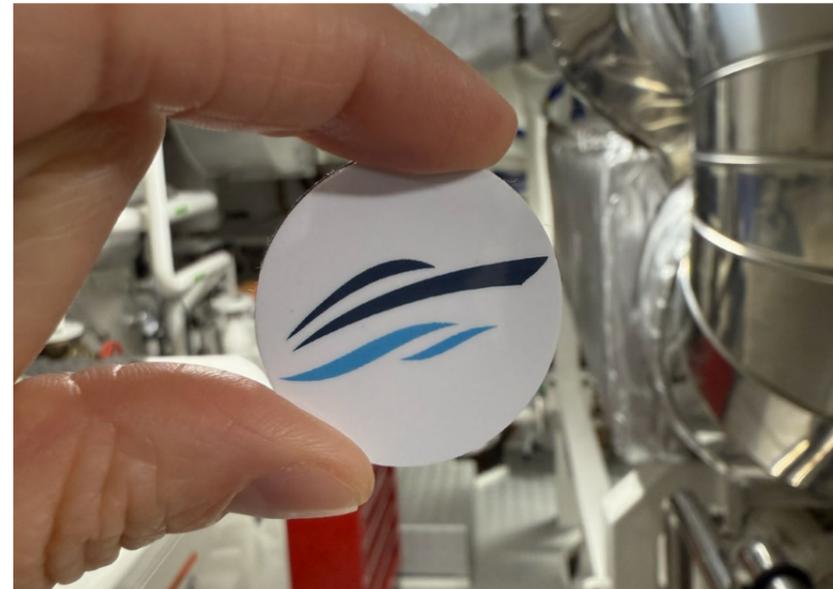

The collaboration was smooth and productive. We had a dedicated contact from the crew, which made it easy to align on workflows, preferences, and timing for onboard visits.

Thanks to our long-standing relationship with the shipyard, getting documentation was quick and hassle-free.

## Crew Requests & IDEA's Solutions

- **General Setup:** The crew wanted a database that was easy to navigate but still kept important details like shipyard IDs. We built a structure that made it simple to find components while keeping everything aligned with shipyard terminology.
- **Daily Routines:** The crew asked how they could manage daily tasks with IDEA. We introduced them to the "Rounds" module and helped set it up for all departments, Engine, Deck, and Interior.
- **Uniform Management:** The Interior team wanted a way to track crew uniforms. We customized the database to support this, making it easy to manage inventory and updates.

## The Result

This project was a great example of what happens when experienced crew and a trusted software partnerwork together. By the time the vessel was handed over, the crew was ready to sail, with a fully operational database that fits their needs perfectly.

**IDEA**  
DATA SOLUTIONS

## Why IDEA YACHT Makes a Difference Onboard

IDEA YACHT enhances operational oversight with greater clarity, tighter control, and improved confidence. By optimising maintenance management and consolidating critical data, it allows crews to maintain a strong operational focus, ensuring the vessel runs safely, efficiently, and to the highest standards.

## With IDEA YACHT, you benefit from:

- **Fewer surprises** thanks to proactive maintenance planning
- **Smarter decision making** through accessible, real-time data
- **Time saved** on admin and reporting tasks
- **Improved collaboration** between departments and shore-based teams
- **Higher operational readiness** with consistent, high-standard upkeep
- **Reduced downtime** and better asset protection through predictive insights

**IDEA YACHT isn't just software, it's a smarter way to manage your yacht.**
